Estimating prices of players

About the project

During the pandemic of COVID-19, the impact leaves major European football clubs with €1b loss, so in this case we will estimate the market pricing of the top rated and well-known players at the next season to have an overview how the pricing of each player will be.

Project GOALS

1. Make the clubs predict the players prices.
2. Give the approximate Ideal pricing for each player.
3. Show the stats of each player when the price of the player will increase or decrease.

SPECIFICATIONS

Using the web scraping for the last season have provided us a solid knowledge of what solutions we can give and how we can enhance players pricing in FIFA Players Market Value. Our data Scientists expertise have made the appropriate EDA on the FIFA Players Market Value by taking the web scraped information and made appropriate Dataframe by using PYTHON to provide strong statistical data and apply the regression models that will give a clear picture of FIFA Players Market Value.
